

Software Requirement Specification (SRS)

1. Introduction

This document defines the functional and non-functional requirements of the system.

2. Functional Requirements

- Customer registration and login
- Product management
- Order processing
- Payment handling
- Shipment tracking
- Review system

3. Non-Functional Requirements

- Performance: Fast response time
- Security: Data protection
- Reliability: System availability
- Scalability: Handle large data

4. Project Scope

The system includes customer, product, order, payment, shipment, and review management.

5. Assumptions

- Users have internet access
- Payment gateway works properly

6. Constraints

- Fixed entities must be used
- Limited development time

7. Conclusion

This SRS provides the foundation for database design.
